

Your facility has experienced significant results with Medline's Pressure Ulcer Prevention Program. We look forward to continuing to work with you on preventing/reducing incidences of pressure ulcers at your facility.

Based on the results of your report, we recommend you consider Medline's ERASE CAUTI Program, VAPprevent or the Hand Hygiene Program. Like the Pressure Ulcer Prevention Program, these are evidence-based solutions designed to improve quality and safety outcomes, increase patient satisfaction, and reduce errors.

Thank you for the opportunity to work with your facility to improve patient care and reduce costs. Please contact your program manager with any questions.
